

TECHNICAL DATA

SR-15 SOLVENT REDUCER - SLOW

July 2010

PRODUCT DESCRIPTION:

SR-15 is a solvent blend designed to improve the "wet edge" or open time of epoxy and polyurethane coatings, both primers and topcoats. It will reduce orange peel, improve wetting and flow, improve gloss appearance and reduce dry spray.

SURFACE PREPARATION:

After mixing the paint well, the SR-15 solvent reducer should be added and stirred in thoroughly.

MIXING / APPLICATION:

The SR-15 solvent reducer should be added as needed to control application viscosity and flow out. Generally 5% to 15% by volume is found helpful. Excessive amounts will cause inadequate coverage and possibly runs in the paint.

PHYSICAL PROPERTIES:

Appearance:	Clear solvent blend
Density:	7.82 lbs/gallon
Shelf Life:	1 year from date of manufacture

PRECAUTIONS:

Use with adequate ventilation and proper respiratory protection. See MSDS for complete instructions and precautions.
